2-5-2019

The background features abstract, overlapping geometric shapes in various shades of blue, ranging from light sky blue to deep navy blue. These shapes are primarily located on the left and right sides of the frame, creating a modern, layered effect. The central area is a clean white space where the text is placed.

Protected Health Information

Individually Identifiable Health Information (IIHI): is information that relates to the individual's past, present, or future physical or mental health condition, provision of healthcare, or payment for healthcare, and that identifies or could reasonably be used to identify the individual.

Protected health information (PHI) under US Federal Law is "individually identifiable health information" held or transmitted by a covered entity (NCCMH) or its business associate (provider), in any form or media, whether electronic, paper or oral.

Identifiers:

- Name: First/Last or Alias of recipient or relatives, employers or household members
- Address: smaller than state: street address, city, county, zip code (or equivalent).
- Dates: dates that are directly related to an individual including birth date, admission date, discharge date, and death date.
- Telephone numbers
- Fax numbers
- Email addresses
- Social security numbers
- Medical record numbers
- Health plan beneficiary numbers
- Account numbers
- Certificate/license numbers
- Vehicle identifiers: serial numbers, including license plate numbers
- Device identifiers: serial numbers (prosthetics, hearing aids, individual's serialized property)
- Web URLs
- Internet Protocol (IP) addresses
- Biometric identifiers: finger and voice prints
- Photographs: full face and any comparable images
- Any other unique identifying number, characteristic, or code

Minimum Necessary Rule

01

Disclose only
information necessary
for coordination of care

02

Disclose only to people
necessary for
coordination of care

Email

Email

- ▶ Transmission
 - ▶ Emails must be encrypted to be considered secure
- ▶ Authentication
 - ▶ Usernames and passwords are generally considered proof of authentication

When sending emails include only
Client number
First and Last initials

This is all that is necessary to identify a client
The first and last initial are included to verify the client

All emails must be encrypted even if they only contain
the client number and initials

Voice Communication

Phone Calls

- ▶ Transmission
 - ▶ Phone calls are generally considered secure in their transmission
- ▶ Authentication
 - ▶ In most cases voice and or phone number is enough to verify the recipient

Texting

Texting

- ▶ Transmission

- ▶ Text messages are often not encrypted and not considered secure in transmission

- ▶ Authentication

- ▶ Text messages often do not require a username and password and are not considered to be authenticated

Texts are NOT secure

Email Phishing and Spoofing

Email Phishing

Bait

- An official looking email from a known website such as Amazon or eBay

Hook

- An urgent message relating to an order or account problem

Reel

- Entering your username and password on a fake site to address the supposed issue

Email Spoofing

Creating a forged email

This is generally done by sending out an email with a fake email header.

Creating an email account with your display name

This can be done by creating an account with your display name using a free email service.

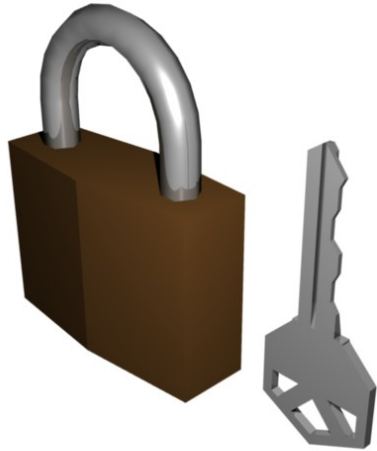

How can you protect yourself?

Question

Does the email request make sense from the recipient?
Is there broken sentence fragments or poor English?

Look

Pay close attention to the email address; does it have
@norcocmh.org or match the expected address?

Multi-Factor Authentication

Multi-Factor Authentication (MFA)

- ▶ Some times called two-factor authentication
- ▶ Similar to how your bank may text or email you when you sign in from a new computer or location
- ▶ NorthStar will require MFA
- ▶ MFA applications are available on the Google play/Apple App Store
